

Harness Fitting

Harness

The harness should be snug, but not tight. Try to aim for 2 fingers placed between the harness and dogs body in all places

5

1

Always check harness fit in pull position!

2

Last Rib

The sides of short harness should not go back past the last rib to avoid putting pressure on the internal organs.

4

Sternum

The neck of the harness should sit on the sternum bone and not above to avoid it sitting on the throat area which would obstruct breathing.

3

Armpit

The harness should not come in too close to the armpit area to avoid rubbing, chaffing and/or discomfort.

When In Pull Position:

----- Correct

----- Incorrect
